## New England Thinstones

Timeless Beauty. Enduring Style. This is what New England Thinstones represents. From neighboring mountains and valleys, rolling meadows and farmlands. From fieldstone, weathered over years, to smooth river rounds harvested from gravel banks gracing the shorelines, we gather a variety of organic blends, dramatic textures and distinctive tones to produce the finest selection of veneer stone available.

New England Thinstones offers a variety of natural tones and cuts, from rustic to refined, from farmhouse to formal. From new commercial construction to residential renovations, our veneer stone is perfectly suited to a wide array of interior and exterior applications. From fireplaces and wine cellars to chimneys or foundation walls. From covering stucco or replacing old siding to resurfacing a mudroom floor or a kitchen backsplash.

Bring Your Vision to Life. Native New England stone is renowned for its distinctive character and patina, found nowhere else in the world. Now, the innovators at New England Thinstones have greatly simplified the work of homeowners, architects, builders and contractors, bringing the warmth of New England stone to many residential and commercial projects.

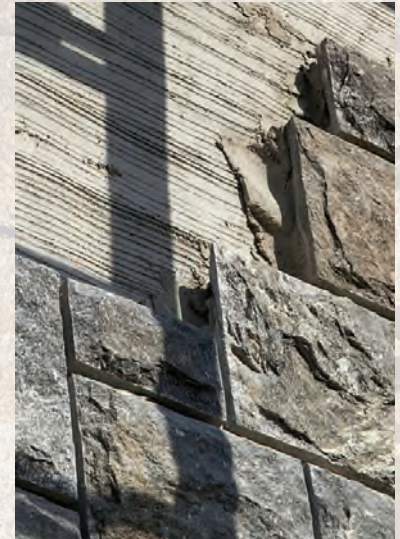

## New England Thinstones

At New England Thinstones, we harvest the stone and procure it ourselves, selecting only the finest available in New England. We use the latest and most advanced cutting technology available, producing perfect corners and flats finished with a consistent profile and industry leading proportions.

Experienced stonemasons find that using larger pieces expedites the installation process and offers more creative shaping and sizing options. Conversely, working with heavy full dimension stone is an arduous process demanding precision hand sculpting and working each piece to an accurate thickness.

Increasing numbers of masons, builders and homeowners are discovering the substantial labor and time saving benefits of using veneer stone rather than much denser full dimension stone. Cladding with Thinstones also reduces the need to use structural footings, and Thinstones offers the advantage of approving the final wall layout prior to installation. Constant efficiency improvements in our production process have enabled us to become cost competitive with manufactured or cultured stone products, until recently thought of as the only affordable choice.

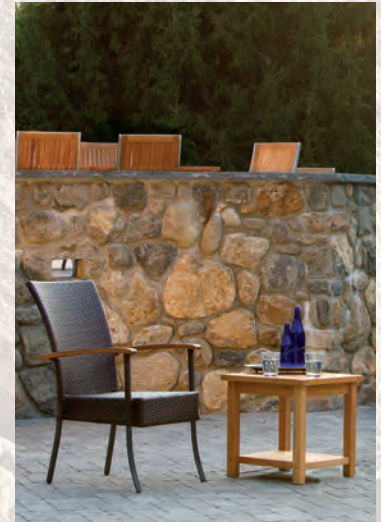

## New England Thinstones

In addition to natural New England Thinstones we also offer options in thin bricks, pavers or Belgian blocks and provide services for veneer stone projects with customized specifications. Flagging, treads, and larger slabs are available to match most of our Thinstones line.

### In Stock & In Control

When you're ready to build, we're ready to ship. Our large inventory of standard items means each order is executed in a timely manner, and we control and monitor all aspects of the process – from procurement of the stone, to the quality control in stone processing and packaging, to delivery of the finished product.

Best of all, shipping is more efficient because the product is thinner and lighter than full dimension stone, enabling us to bring the warmth of authentic New England Thinstones to all corners of the country with significant freight savings.

## New England Thinstones

## Corners

**“It’s all about the corners”**...A common refrain from experienced stonemasons underscores the importance of a well proportioned corner precision cut to ninety degrees.

The corner piece is the first to be installed and ultimately sets the bar for the standard of the finished work. Corners cut by hand on a table saw are limited in size, often not squared and will likely break if sawn with an over-cut.

We use a automated corner saw with two blades set at right angles to one another capable of producing twenty inch long pieces with a consistent thickness. The larger the piece, the more options a mason will have to resize and reshape it.

## New England Thinstones

## Packaging

New England Thinstones offers the convenience of packaging in covered weatherproof recycling totes. Available in either 8 sq. ft. (flats) or 8 linear ft. (corners) The perfect solution if running short of material, planning a smaller weekend project or encountering on-site challenges such as elevators or a limited interior work area.

Pallets come with sturdy end gates to ensure safe and level stacking.

Flats: 200 sq. ft./pallet • 100 sq. ft./pallet • 50 sq. ft./pallet  
8 sq. ft./tote

Corners: 50 linear ft./pallet • 8 linear ft./tote

New England Thinstones are 100% natural stone.  
Shade and color variations are to be expected.
